Calypso

Make your water heater smart and lower your electricity bill

Smart Water Heater Controller

Small device, big savings

Hot water consumption accounts for 20% of a household's electricity bill.[1]

Save big by turning off your water heater during peak demand periods or when you're away from your cabin for an extended period of time.

Keep full control

The Sinopé app allows you to remotely turn your water heater on and off, monitor your energy consumption, view the status of your device, and create programming that fits your daily routine.

Designed with your needs in mind!

The water heater controller's sensor ensures a minimum temperature threshold to prevent the development of legionella bacteria so that your whole family stays healthy!

His best allies

Temperature sensor for optimal protection against legionellosis.

[Included]

Water detection cable to detect potential leaks coming from the water heater.

[Optional]
